

Camping Satellite System Channel Scan

There are now many more Free To Air Satellite channels available than the channels pre programmed into the M30/12 receiver. In order to update your receiver with the most upto date channel listing just follow this simple guide.

Channel Scan

1. Follow the Easyfind set up as laid out in the included colour fold out guide and line up your dish on Astra 28.2 so you are watching satellite TV.
2. Now that we are lined up and receiving the satellite TV signal from ASTRA 28.2 we can run a scan and update the available channel list.
3. Press the "MENU" button on the remote control.
4. Press the "DOWN ARROW" twice so that the Satellite symbol is highlighted
5. Press the "OK" button
6. Press the "DOWN ARROW" three times so that the "Auto Scan" at the bottom of the list is highlighted
7. Press the "OK" button
8. Now use the "LEFT ARROW" to scroll the first field until it displays "ASTRA 28.2E"
9. Press the "DOWN ARROW" three times so that "Search" at the bottom of the list is highlighted
10. Press the "OK" button
11. Now let the scan progress until it is finished. Your channel list is now upto date. When it is finished press the exit button to return to watching the TV.
