

Issue with iPad / iPhone on iOS 9.3.5 (possibly 10.x)

Sometimes at Step 9 in the user manual you may get to the page below and get a “Security Mode” drop down menu with no entries and an “Apply” button at the bottom that does not work.

If this happens please refresh the page using the refresh icon in Safari indicated below:

You will be returned to the main status screen, select Setup from the top menu again and on the next screen you will see that the details for the network you were connecting to are already pre-filled, just click the Next button at the bottom of the page and you will be back at Step 9 with the page showing correctly and you can proceed as per the user manual.
